

MERN Stack Journey – Class 13 Notes

1. Getting URLs for Your Images (Cloudinary)

Cloudinary is a cloud-based media management platform used to upload, store, and get URLs for images.

It is widely used in real-world MERN applications to improve performance and scalability.

2. Installing Visual Studio Code

VS Code is a lightweight and powerful code editor used for HTML, CSS, JavaScript, React, and Node.js.

It supports extensions, debugging, and cross-platform development.

3. Linking HTML and CSS Files

The HTML link element is used to connect external CSS files with HTML.

It is a void element and must be placed inside the head tag.

Syntax:

```
<link rel="stylesheet" href="tourism.css" />
```

MCQs:

1. Which HTML element is used to link HTML and CSS files?

Answer: link

2. The link element is a void element.

Answer: True

Interview Questions:

1. What is a void element?

Answer: An HTML element that does not require a closing tag.

2. Why do developers use Cloudinary?

Answer: For fast image delivery, CDN support, and easy media management.
